Looking for a **Guest Editor** for the **Region 6 Summer 2020 Newsletter**. I will *gladly help* via emails. Please contact me at ddiget@gmail.com and/or Jean Kaufmann at jeikaufmann@hotmail.com , if you are ready to volunteer. I'm concerned that there won't be a summer issue if a volunteer can't be found. Thank you for your help and support of Region 6. *Deb*

AIS OFFICERS AND ADMINISTRATIVE OFFICERS

Officers:

President: Jody Nolin, Rushsylvania, OH 43347, phone: (614) 507-0332 | e-mail: jody.nolin@gmail.com

1st Vice-President: Andi Rivarola, Valley Glen, CA 91401, phone: (818) 802-4188 | e-mail: andinsky@gmail.com

2nd Vice-President: Bonnie Nichols, Dallas, TX 75229, phone: (214) 676-9892 | e-mail: BJNHTN@aol.com

RVP'S MESSAGE

Happy New Year greetings to Region 6. This is the time of year when my mailbox and inbox are full of catalogs of all sorts of blooming plants. I actually started my iris orders—very early for me. So, while it is drab and cold and either raining or snowing or both and very brown outside, I have wonderful dreams of all my spring blooms that I hope to see sooner than later. So far it has been above normal temps for me but again they say the very cold will be here soon. I figure if it stays warmer, plants will germinate sooner and bud sooner...and you see

where this is going. But of course, something always happens and it still takes forever for spring to hit mid-Michigan. Region 6 has a very wide weather range from southern Indiana to the upper peninsula of Michigan so while it is spring somewhere, it is definitely still winter someplace else.

Again, as I read last year's awards from AIS I am very excited to see the Region 6 hybridizers names on the lists again. Makes me proud to be a part of it all (without doing all the hard work.) Congratulations to all.

Looking forward to seeing you all at the spring meeting in Muncie hosted by the IGEI.

ERROR: Don't you just hate it when spell check corrects your words. Apparently, that's what happened to John Kaufmann when he wrote the Footnote to Judy Hollingworth's article, 'My Siberian's Don't Grow as Well as Your Siberians-Did You Feed Them?' in the Fall 2019 issue of the Region 6 Newsletter (page 12). His last sentence: "I will be storing the gulf fertilizer." should have read: I will be storing the bulk fertilizer.

2020 INTRODUCTIONS FROM REGION 6 HYBRIDIZERS

From Chuck Bunnell:

This year Aitken's Salmon Creek Garden will introduce Chuck's new MTB, 'Heavenly Dream'. www.flowerfantasy.net

A Note From Carol Morgan:

I am not introducing any iris in 2020. I did register seedling #2016-1 in 2019 with the name 'Mírame' (*photo right*). I am sending it out to various regionals and conventions to see how it does in various areas of the country. Its form is unusual and I am hoping it continues to perform as I have grown it, no matter the conditions it must survive.

The seedling was one of several from the same pod; all of them tended to be of the same form, but not all were *always* the flat form. Most of them were flat 90% of the bloom time and reverted back to standard forms near the end of the bloom time. Some managed to have five falls and then one rebellious fall would stand up nice and erect. There were various combinations of white plicatas with different colored styles and some were dark purple similar to 'Rayos Adentro', one of the parents.

I am excited about 'Mírame' because I have not seen any other MTB with the flat form. Hope you all like it too.

Mírame

2016-4

2016-6

A row of Mírame

From Jill Copeland:

Jill has 3 iris introductions this season, 'Great Lakes Waves' a JI with six falls (photo top right), 'Caught My Eye' a lovely Pseudata that caught Deb's eye in our garden and John's eye at our iris show last June (middle photo). 'North To South' is a SPX tetraploid, (photo left). All are available from Ensata Gardens. www.ensata.com

From Bob Hollingworth:

Two Siberians:

'Am I Amethyst' a tetraploid, has been a very strong grower here in Michigan. Stalks are tall (40"+) for a tetraploid. Typically, it has 4-5 buds (3 in the terminal). Mid-violet (amethyst) with lighter blue on the stylearms that adds interest, all very strongly ruffled. (photo right)

'Pure Flattery' is obviously a "flattie". It is reliably 6-falls with 3-4 buds (often 3 in terminal). Comes from several generations of breeding from Ho Shidara's 'Kita No Seiza' (1997) and 'Haresugata' (1999) (aka 'Parasol') to improve vigor, disease resistance, form, and bud count. Cool colors - light lavender with a big white signal veined light green. The form is full, with overlapping falls making the circle. (Photo: left) All are available from Ensata Gardens www.ensata.com

An Update From The Cordes Hybridizing:

Welcome to 2020... I am so excited about my garden possibilities this year. I just hope I can gather it all in while maintaining focus and vision for my hybridizing efforts. 'Royston Rubies' (2017) continued to impress me, and I was so blessed to see a photo of it on the region's fall newsletter!

After a long and questionable absence of blooming, we discovered Autumn's 'Eye For The Guy' (2017) (photo right) in several clumps that just made me smile with their beauty and splendor. Our bloom season last June and *into* July was spectacular. One of my seedlings (M13A) (photo left) was in flower for a full 30 days... 4 stalks on a two-year clump. It is a brown iris -- to which my dad (bless his heart) would say, "It looks like a dead flower already, and it just opened!".

We only LOOK like we don't have anything coming up for introductions! It's a trick to grow out stock in the "Up North". Still trying to figure it out!! We have many more clumps of selections, lined out seedlings, and a plethora of 2017 seedlings that will all be in flower this next June. Some of the crosses were made by Steven and Taavi, too!

I do not have any introductions "yet" for this year. Joe Ghio tested the waters last year with some "summer introductions", iris that didn't quite have enough stock to introduce in the mailing list/catalog, yet did meet or exceed growing and blooming expectations -- thus being introduced later in the summer, through his Facebook page, or special e-mailing. To add some "flavor" to the commercial world, this may be how I choose to get my feet wet. It seems a bit more practical, if you look past the part where I'm still a dairy farmer and summers are a LOT of extra work!

Meet Hybridizer David Mauerman

My seedlings are not yet at the stage of naming or introducing. Hopefully they will be within the next several years! I am going to reserve some names for the first time soon through AIS, and several of my seedlings are growing as part of the Region 6 display garden at the Willott Iris Garden in Cleveland. A spring regional meeting is scheduled for 2021 there. Hoping for good growth and feedback!

Photo left is David's Seedling 15.16.19.38C.

David Mauerman, is a new hybridizer in the Cleveland, OH area. Visit him at www.facebook.com/DavidMauerman

Virginia Wesche is downsizing her garden. She has numerous versicolor iris that are in need of a new home. If interested contact Virginia @ 419-439-1208.

CONVERSATIONS AFTER THE RAIN

Brian Wendel's reflection of the 2019 Region 6 Spring Meeting

After several years of dreaming, hoping, praying, tending and weeding for the big event, it arrived almost too soon. For some reason, at 4 am Saturday morning of the Regional, I awoke and felt an overwhelming sense of peace that today would be an amazing day. I awoke a little later with the ear worm song of "Let Me Be Singing When the Evening Comes!" ringing through my brain. We were blessed with ideal conditions for viewing the first two iris gardens. As we approached the third garden... raindrops began collecting on the windshield...oh bother!!!

With the auction over, the rain had vanished as well. The sun reappeared to illuminate the gardens refreshed by the recent shower, to help accentuate some amazing iris clumps. 'What's on Second?' (Hollingworth 2017)

(photo above right) looked very much like an exquisite butterfly... a real garden favorite of visitors. 'Currier' (Hollingworth 2003) (photo left) was also making a grand display. 'Ginger Twist' (Schafer-Sacks 2009) (photo right) made an impressive showing as Bob H. and I admired it in the

back yard.

Peggy and I got to enjoy "Sans Souci" (Van Houtte 1854) (photo right below), that had made a grand 3-year clump just outside the garage. It is also an iris that passes the test of "toss a rhizome over the fence and it will take off and grow" and usually has nice bloom stalks for the iris show as well. A region 6 judge had also shared in Lisa's garden the MTB, "Velvet Intrigue" (Wendel 2010), was her favorite of a certain hybridizer's introductions thus far.

Chuck B., Adam C., and I viewed an MTB seedling, 19M18 (photo left below). I had been observing the clump

expectantly ever since the bloom stalks appeared... four equally tall, well branched, and amply budded. Maiden bloom occurred on the day of tour and I preferred a different, nicer, color and began berating it for supposed faults instead of seeing amazing attributes. Chuck gently, yet thankfully firmly, pointed to distinguished beard color, excellent flower form, nice flower color contrast, great branching and lots of buds. It's never wise to ignore the council of a Dyke's Medal recipient and friend, especially when he related if I was going to compost it ... to please share a rhizome with him for crossing purposes. We also viewed other nondescript MTB's that were shared or composted.

Judy H., with a sparkle in her eyes and a quick step, was shown her namesake, “Judy, Judy, Judy” (Hollingworth 2010), with about 13 well- branched and budded bloom stalks in another garden bed. She quickly asked about S-131 (photo left), a Siberian seedling of mine with a nice clump effect and ample buds and bloom stalks. It has nice veination effects in the flower when in bloom, but not for the tour, as it was a bit early. I am so very thankful and grateful for the words of encouragement from Judy and Bob H. regarding the Siberians, potential crosses etc., for Siberians have a very special place in their hearts just as they do in mine; for the noble Siberians are so very often overlooked by their bigger flowered cousins. I just wish the weather had cooperated more, so the visitors could behold nicer, larger Siberian clumps with lots more flowers opened.

While not after the rain, and in another garden, I learned from Barb B. the story of how “Gesundheit”, (Bunnell, 2012) had been named. I thought “Gesundheit” to be well named, for the word is an appropriate German response to what is said after one sneezes. Barb related the name came to her and Chuck in Peggy’s garden, that It looked like a tar truck had come along and tar was splattered on the flowers indiscriminately... describing “Gesundheit” flower color very well.

Anita and I were so very thankful for all the Region 6 Iris guest visitors and many pre-regional garden visitors coming and for their amazingly, encouraging comments. We are so thankful for the beauty, peace, and tranquility that was present in the third garden despite the rain that arrived to greet our guests initially. The joy that filled our hearts that amazing day was indeed worth all the effort that it took getting everything ready for the short sojourn of our guests here that day. The rain couldn’t dampen the spirit of a great garden visit after the sun came back out to illuminate and make the gardens sparkle in the afternoon sun. I can’t remember if there was a rainbow or not, but it doesn’t matter, it was still an amazingly, beautiful day and our hearts will cherish the memories of it for a long time to come. So, with a very tired, but truly, thankful heart, I can indeed say that I was singing when the evening came... and the early morning sense of peace had indeed permeated and filled the entire day perfectly. Until next time.

Meet Hybridizer Darrell Reno

My name is Darrell W. Reno. I started hybridizing last year and have 130 seeds in the ground. I'm really looking forward to April when the seedlings will begin emerging and May since I have about 50 new crosses planned. I'm planning to be a very active hybridizer going forward.

I live in southern Ohio, about 80 miles south of Columbus.

BUILDING A FLOATING PLANTER

Jody Nolin

I first heard of floating planter in a Facebook post. It looked cool and my pond looked empty. Since I have a lot of Pseudotas and Louisianas it sounded like an option for freeing up some bed space. When I searched for them on-line I found that they were pretty expensive.

Well I come from a long line of scroungers, so I next searched for some directions to build one. There are a lot of different styles of floaters you can find online, from single plant pots to floating islands. Most of them were too complex for me or required special parts. I opted for a simple single pot design. It took some trial and error, mostly error, but I got them to work.

Each planter will hold one large clump. They last here about two years without lifting from the pond. I like the look of them moving across the pond with the wind. However, mine don't float freely because I found that if they landed at the edge, the raccoons dig in them. So, each has a brick anchoring it at least 3 feet from shore. I can still snag them to pull weeds and check the iris and they won't get caught under the dock either. So, here is the method I used.

You will need:

5-7 gallon pot with a firm lip (a nice curled edge is good)	2 pool noodles
2-3 empty plastic bottles (water or soda)	zip ties
1 can Great Stuff foam insulation	

Find a pot with a firm lip. Ideally it should have a wide top and taper to a smaller base.

Poke 6 – 8 holes just under the rim. Zip tie the pool noodles to the pot. The noodles bend easily and should be tight to the pot, just under the rim. This will hold the edge of the pot above the waterline.

Noodles come in lots of colors so pick what you like. If your pot only needs one and half noodles, they cut easily. Also poke holes around the pot to let the water in. We will be blocking the bottom holes to keep the soil.

Next, determine how heavy your soil is. If you use a light potting soil you may be able to skip the next step. Try floating the pot with soil to see how high it rides. My clay/potting mix is heavy, so it needed more buoyancy than the noodle. To provide this, I put 2 empty, capped plastic water bottles on the bottom of the pot and covered them with Great Stuff foam.

Great Stuff is just that. It won't degrade or harm the fish. And it expands a LOT, so use sparingly. This step closed the bottom holes in the pot. If you don't need the bottles, just foam the bottom to close the holes. Almost done!

Plant your iris and test the balance. I used some small stones to be sure the pot floats evenly. My pots stay in the pond year-round. They ride the ice pretty well. The noodles last about 2 years here. I cut the zip ties and replace them when they look melted by the sun. The only other problem I've had is crayfish tunneling. And I find frogs using them to sun themselves. Have fun with this.
